

Loss of inflection in the diachrony of French nouns

LOUISE ESHER

Overview

- Case study on loss of inflection for 2 morphosyntactic features in the history of French

CASE: reduction in number of feature-values, eventual loss of feature from paradigm

NUMBER: retention of 2 feature-values, progressive loss of formal contrast

- Types of change implicated in loss of inflection
- Pathways to uninflectedness/uninflectability

Preliminaries

Uninflectability and other non-canonical properties
in an abstractive, paradigmatic approach

Baerman, M., D. Brown & G. G. Corbett. (2005). *The syntax-morphology interface: A study of syncretism*. Cambridge: CUP.

Blevins, J. (2016). *Word and paradigm morphology*. Cambridge: CUP.

Spencer, A. (2020). Uninflectedness: Uninflecting, uninflectable and uninflected words, or the complexity of the simplex. In L. Körtvélyessy & P. Štekauer (eds.), *Complex words: Advances in morphology*. Cambridge: Cambridge University Press, 142–158.

Stump, G. (2016). *Inflectional paradigms*. Cambridge: CUP.

Theoretical perspective

- Word-and-Paradigm approach: lexeme as the array (paradigm) of its inflected wordforms
- Abstractive approach (Blevins 2016): speakers are exposed to full wordforms, any segmentation takes the form of abstractive generalisations across full wordforms
- Paradigm linkage approach based on Stump (2016): there are 3 different overlaid paradigms
 - content paradigm: inventory of feature combinations required by syntax
 - realised paradigm: inventory of inflected forms expressing feature combinations
 - form paradigm: mapping between content and realised paradigms

Uninflectability

Spencer (2020) introduces initial distinction between:

- **Uninflectable:** 'occur in all the morphosyntactic contexts available to inflecting lexemes'
'their form is invariable' (for whole paradigm or e.g. for a particular feature)
- **Uninflecting:** given lexeme is not expected to have multiple forms/cells
e.g. Eng. *almost*
- **Defective:** paradigm is "missing" certain forms/cells
e.g. Eng. *forego* (no past, *forwent)

A subtype of syncretism (Baerman et al. 2005: 2, 27-33)

- **Syncretism** 'failure to make a morphosyntactically relevant distinction'
morphosyntactic feature contrasts exist and are reflected in e.g. agreement phenomena
some distinct feature combinations map to identical morphological forms

- **Uninflectedness** morphological inertness
'lack of response by morphology to distinctions which are syntactically relevant'

Uninflectability
(Spencer 2020)

- **Neutralisation** no formal contrast where a featural distinction is not syntactically relevant

A subtype of syncretism (Baerman et al. 2005)

Canonical syncretism (2005:34)

- 'There is, **in certain contexts, a loss of distinctions between some but not all values** of a particular feature F.
- This loss may depend on the presence of a particular combination of values of one or more other features (the context).
- Other syntactic objects distinguish **those values of feature F**, and **they are** therefore syntactically relevant.'

Uninflectedness [=Uninflectability] (2005:33)

- 'There is, **in certain lexemes only, a loss of all values** of a particular feature F found elsewhere in the language.
- This loss may depend on the presence of a particular combination of values of one or more other features (the context).
- Other syntactic objects distinguish **values of feature F, either generally or in the given context**, and **feature F is** therefore syntactically relevant.'

Becoming uninflectable: borrowing

Uninflectable nouns in Russian are typically borrowings with 'a phonological shape which is difficult to accommodate to the Russian morphological system' (Spencer 2020)

Recalls **arrested development** in defectiveness (Baerman & Corbett 2010, Bach & Esher 2015):

- lexeme enters language with an incomplete array of (realised) forms
- often for reasons of phonological shape
- lexeme does not go on to develop additional distinct inflected forms

Baerman, M. & G. G. Corbett (2010). Defectiveness: Typology and diachrony. In M. Baerman et al (eds.), *Defective paradigms: Missing forms and what they tell us*. Oxford: OUP, 1-18.

Bach, X. & L. Esher (2015) Morphological evidence for the paradigmatic status of infinitives in French and Occitan. In D. Haug (ed.), *Historical Linguistics 2013*. Amsterdam: John Benjamins, 135-154.

Becoming uninflectable: decay?

A second pathway to defectiveness: **decay** (Baerman & Corbett 2010, Bach & Esher 2015)

- lexeme enters language with a complete array of (content, form, realised) cells
- some forms/cells fall out of usage due to lexical/syntactic changes
- replaced by alternative construction, not innovative forms for same lexeme

Baerman, M. & G. G. Corbett (2010). Defectiveness: Typology and diachrony. In M. Baerman et al (eds.), *Defective paradigms: Missing forms and what they tell us*. Oxford: OUP, 1-18.

Bach, X. & L. Esher (2015) Morphological evidence for the paradigmatic status of infinitives in French and Occitan. In D. Haug (ed.), *Historical Linguistics 2013*. Amsterdam: John Benjamins, 135-154.

Becoming uninflectable: sound change?

Common source of syncretism: **regular sound change**

- regular sound change is morphology-blind
- can eliminate previous formal alternation patterns (affecting stem, affixes, etc.)
- formal contrast sometimes restored by analogical innovation
- more often, formal identity embedded in inflectional system as recurrent distributional pattern

Case in the history of French

Loss of feature and values from morphosyntax

Schøsler, L. (1984). *La déclinaison bicasuelle en ancien français*. Odense: Odense University Press.

Sornicola, R. (2011). Romance linguistics and historical linguistics: Reflections on synchrony and diachrony. In M. Maiden, J. C. Smith & A. Ledgeway (eds.), *The Cambridge history of the Romance languages, vol I: Structures*. Cambridge: CUP, 1–49.

Absence of distinction in modern French

'wall', modern French

Ce **mur** nous bloque la vue.
This.M.SG wall[M].SG blocks our view.

Je n'apprécie pas **ce** **mur**
I don't care for this.M.SG wall[M].SG

Les fondations de **ce** **mur**
The foundations of this.M.SG wall[M].SG

	SG	PL
--	<i>mur</i>	<i>murs</i>
	myB	myB

Mod. Fr morphosyntax does not distinguish case on nouns

No case distinction in content paradigm, form paradigm or realised paradigm: feature is completely **absent**

It was not ever thus...

'wall', classical Latin

	SG	PL
NOM	mur <u>us</u>	muri:
ACC	mur <u>um</u>	muro: <u>s</u>
GEN	muri:	muro: <u>rum</u>
DAT	muro:	muri: <u>s</u>
ABL	muro:	muri: <u>s</u>
VOC	mure	muri:

'rose', classical Latin

	SG	PL
NOM	rosa	rosae
ACC	ros <u>am</u>	rosa: <u>s</u>
GEN	rosae	rosa: <u>rum</u>
DAT	rosae	rosi: <u>s</u>
ABL	rosa:	rosi: <u>s</u>
VOC	rosa	rosae

12 sets of feature-values

=> 12 cells in content paradigm

7-8 distinct forms in realised paradigms

Case distinction in content paradigm
(syntactically/morphosyntactically relevant feature)
and formal contrast in form/realised paradigms

Loss of featural and formal distinctions

'wall', later Latin

	SG	PL
NOM	mur <u>us</u>	muri:
ACC	mur <u>u</u>	muro: <u>s</u>
ABL	muro: <u></u>	muri: <u>s</u>
VOC	mure	muri:

'rose', later Latin

	SG	PL
NOM	rosa	rosae
ACC	rosa	rosae: <u>s</u>
ABL	rosae: <u></u>	rosi: <u>s</u>
VOC	rosa	rosae

Syntactic change: prep+ACC/ABL used in place of stand-alone GEN, DAT

Regular sound change: loss of final -M

Fewer content cells (8)

Fewer realised forms (5-7)

Loss of featural and formal distinctions continues

'wall', old French

	SG	PL
NOM VOC	mur s	mur
ACC ABL	mur	mur s

'rose', old French

	SG	PL
NOM VOC	rose	roses
ACC ABL	rose	roses

Regular sound change: loss of final unstressed vowels

Fewer realised forms (NOM=VOC, ACC=ABL)

Analogical change: final -s in NOM-VOC.PL of 'rose' class

Syncretism of all cases in plural

Morphosyntactic relevance of case: masculine nouns

For masculine nouns, case is visible via agreement phenomena => of demonstrable morphosyntactic relevance

NOM.SG	en un vergier	li		chevaliers		toz jors vendroit
	in an orchard	the.NOM.SG		knight.NOM.SG		all days would-come
	Li	chevaliers	fu	biaus	et	cointes
	the.NOM.SG	knight.NOM.SG	was	fine.M.NOM.SG	and	distinguished.M.NOM.SG
OBL.SG	il	trova	le	chevalier		
	he	found	the.OBL.SG	knight.OBL.SG		
	d'un	chevalier	preu	et	hardi	
	of-a	knight.OBL.SG	noble.OBL.SG	and	brave.OBL.SG	

(LA CHASTELAINE DE VERGI, C13TH)

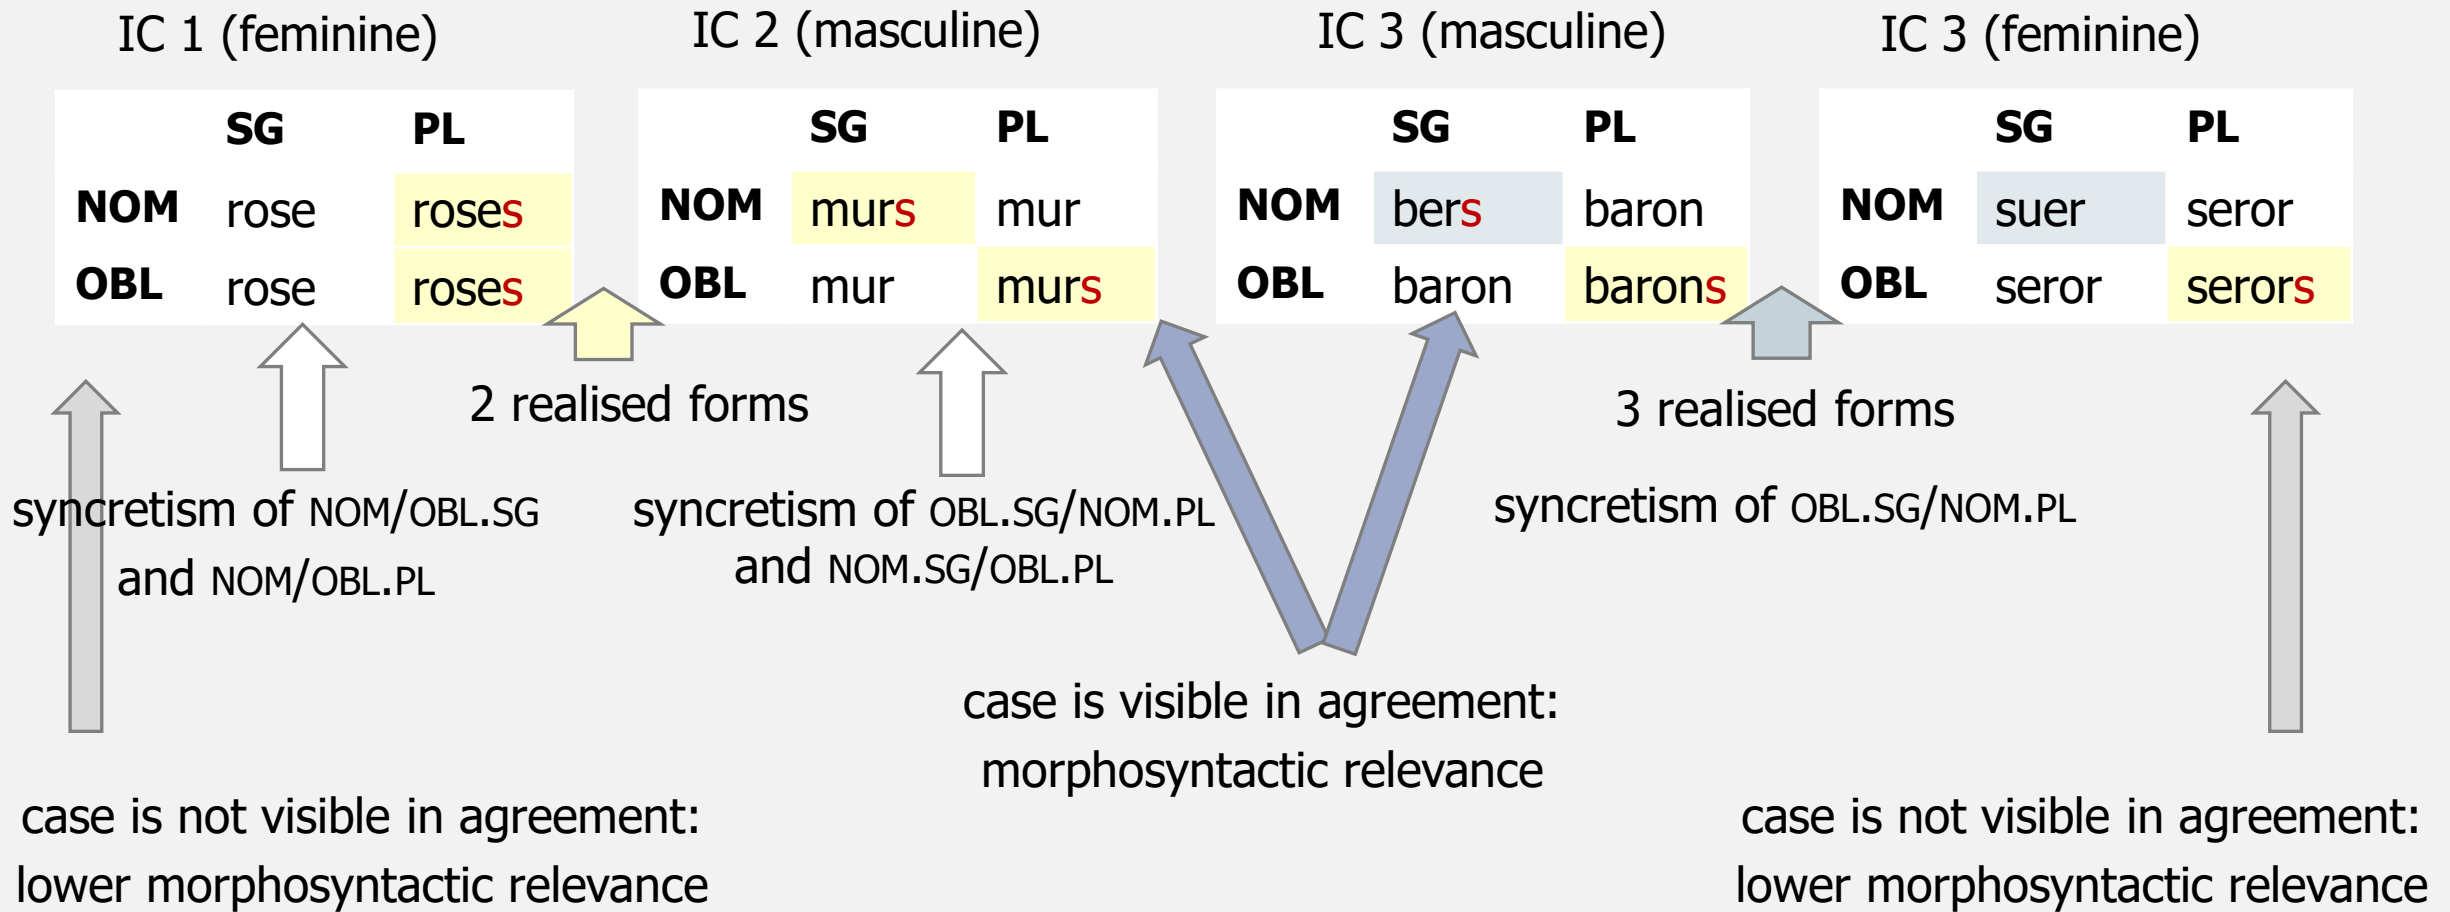

Morphosyntactic relevance of case: feminine nouns

For feminine nouns, case is not visible via agreement => of questionable morphosyntactic relevance

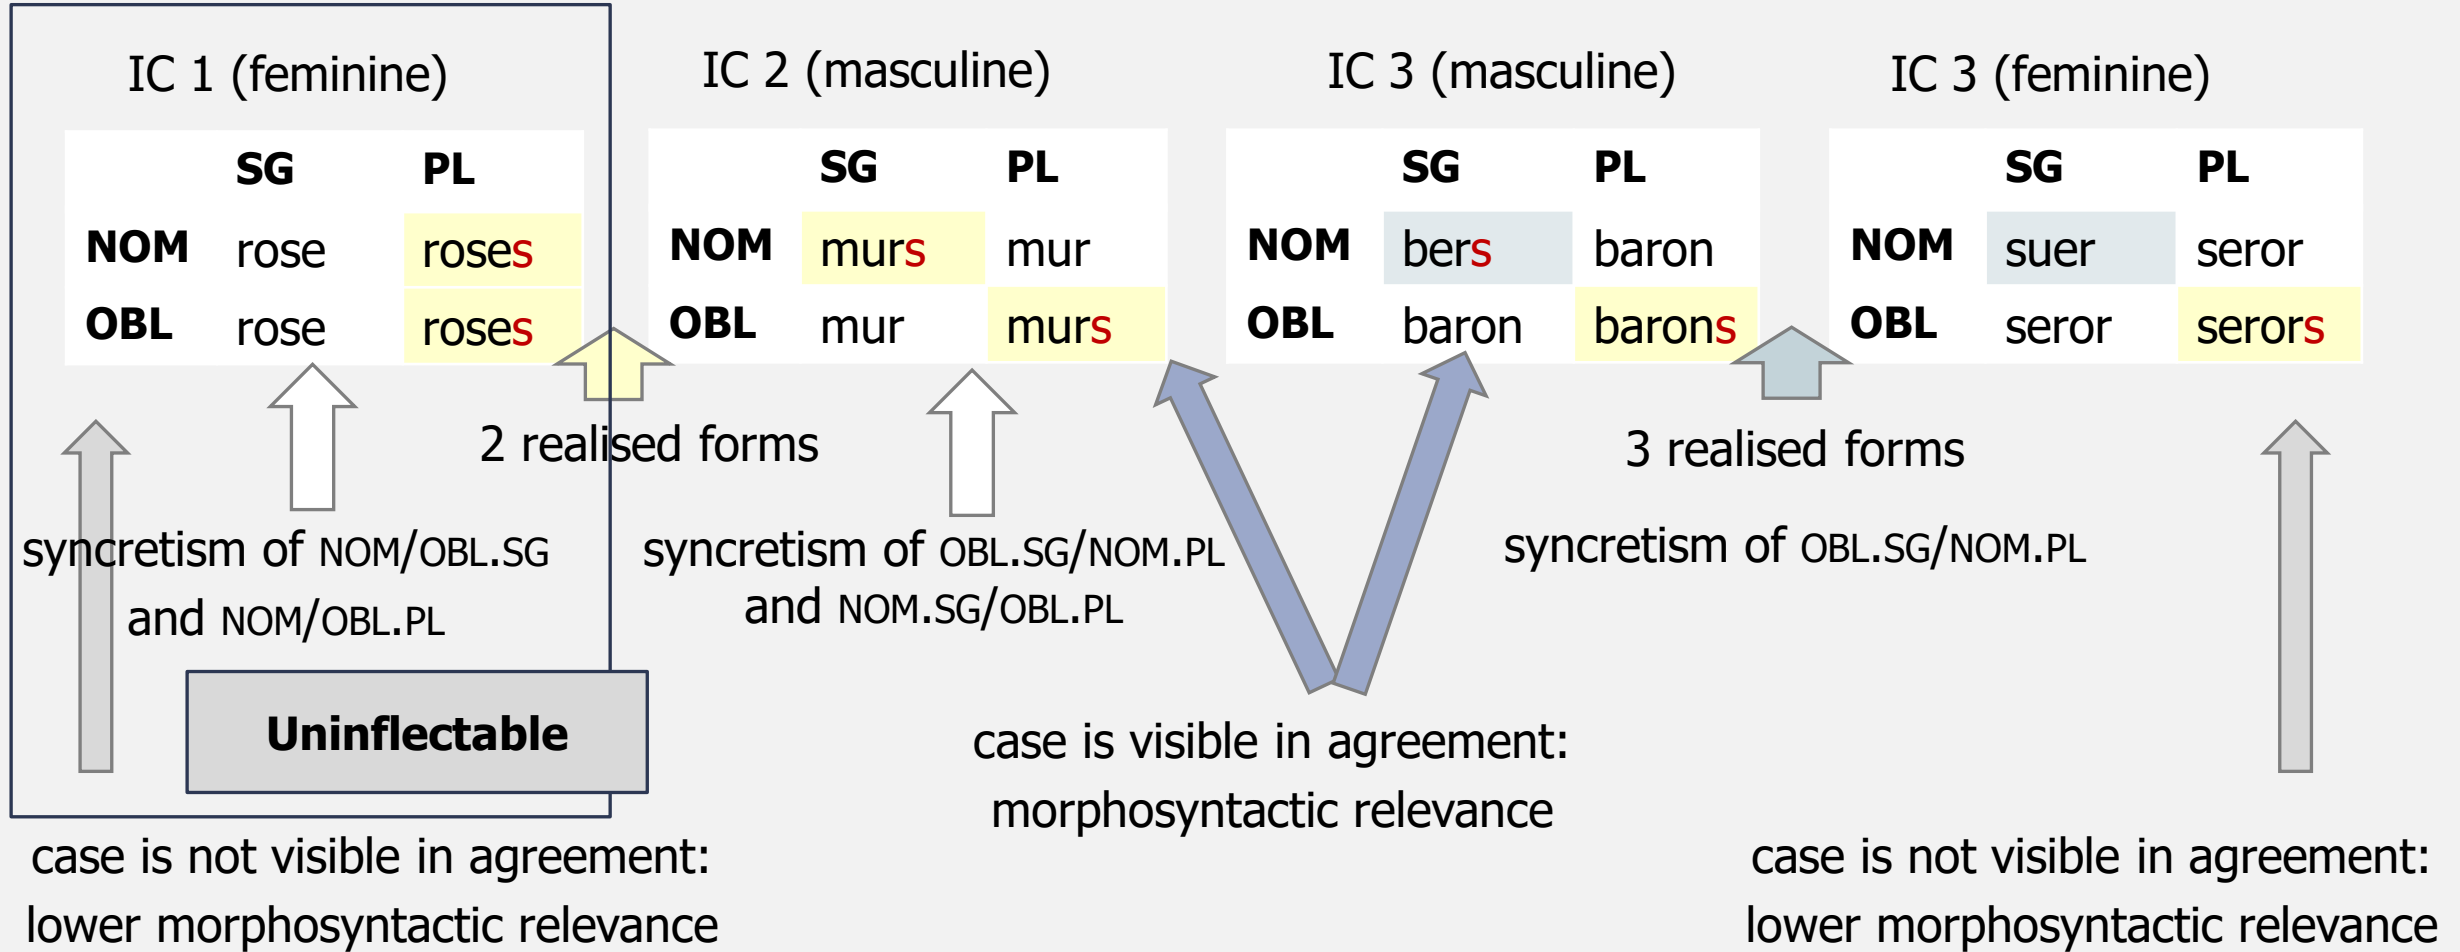

SG	sui	haute	dame	honoree	
	I am [a]	noble.NOM.SG	lady[F].NOM.SG	honoured.F.NOM.SG	
PL	d'amer	dame	si souveraine		
	to love [a]	lady[F].OBL.SG	so sovereign.F.OBL.SG		
	Les	dames	ont oï le conte,		
	The.NOM.PL	lady.[F].NOM.PL	have heard the story		
	querre	toutes	les	dames	de la terre
	to fetch	all.F.OBL.PL	the.F.OBL.PL	lady[F].OBL.PL	of the land

(LA CHASTELAINE DE VERGI, C13TH)

Gender and major inflectional classes for nouns (mediaeval French)

Gender and major inflectional classes for nouns (mediaeval French)

Subsequently...

Analogical change:

Oblique forms supplant nominative forms in all syntactic contexts where NOM was expected

- No case distinction in form or realised paradigm of any noun
- Case not visible in agreement for nouns of any inflectional class or gender

Sound change: loss of final –s

Loss of case in late-mediaeval French

Early mediaeval period: case distinctions in some inflectional classes, and in agreement for masculine nouns

	SG	PL		SG	PL		SG	PL		SG	PL
NOM	rose	roses	NOM	murs	mur	NOM	bers	baron	NOM	suer	seror
OBL	rose	roses	OBL	mur	murs	OBL	baron	barons	OBL	seror	serors

4-cell content paradigm for all nouns, *rose*-type can be considered uninflectable for case

End of mediaeval period: no case distinction for any inflectional class, or in agreement for either gender

	SG	PL		SG	PL		SG	PL		SG	PL
	rose	roses		mur	murs		baron	barons		sœur	sœurs

2-cell content paradigm for all nouns, feature CASE is no longer present in morphosyntax

Summary: loss of case inflection ('decay')

Inventory of forms in the **realised** paradigm reduces

- sound change produces syncretism between previously distinct forms
- analogical change produces syncretism between previously distinct forms

Inventory of morphosyntactic feature combinations in the **content** paradigm reduces

- syntactic change eliminates previously distinct feature values
- rise of syncretism in other word classes reduces visibility of feature via agreement

Ultimately, reduction to a single form and loss of feature from morphosyntax

Interplay of processes produces uninflectability in some lexemes before this point

Number in the history of French

Morphosyntactic contrast (content paradigm) retained

Syncretism (form, realised paradigms) due to sound change

Number agreement in modern French

Morphosyntactic feature with 2 values: singular, plural

Number value of controller (noun) visible via agreement on targets (adjectives, determiners...)

SG	sə	livʁ	e	ʃɛʁ
PL	se	livʁ	sɔ̃	ʃɛʁ
	this	book	be	dear

Determiner and verb both
show number agreement

Content paradigm of French nouns

2 values for NUMBER are required by morphosyntax

Content paradigm must include 2 cells

SG	PL
{livre, SG}	{livre, PL}

Realised paradigm of French nouns

2 values for NUMBER are required by morphosyntax

Content paradigm must include 2 cells

For most nouns, no formal distinction:

forms in realised paradigm are identical

SG	PL
{livre, SG}	{livre, PL}

SG	PL

'eye'	œj	jø	

Summary: loss of number inflection

Inventory of morphosyntactic feature combinations in the **content** paradigm remains stable

Feature remains relevant for morphosyntax and visible in inflection

Inventory of forms in the **realised** paradigm reduces

- sound change produces syncretism between the 2 previously distinct forms

Result is uninflectability in the largest inflectional class

- majority inflectional class shows non-canonical phenomenon
- no conflict: canonicity is an ideal used for calibration, independently of statistical incidence

(Corbett 2009, Corbett & Fedden 2018, Audring 2019)

Conclusions

Case, number and uninflectability

Overview

Uninflectability occurs for the features CASE and NUMBER in the history of French

- Loss of inflection
- Recalls 'decay' in defectiveness (lexemes lose paradigm cells/forms)

A non-canonical property, but can occur stably over centuries and in an inflectional class which is a statistical majority, as for NUMBER in French

Conditions on emergence via loss of inflection

Uninflectability arises via interplay of multiple syntactic/analogical/sound changes

- Retention of (low number of) functional contrasts:
 - 2 values of a feature are distinguished in agreement, maintained in content paradigm
 - if these are lost, as for CASE in French, feature is entirely lost from content paradigm and it is no longer meaningful to speak of uninflectedness
- Reduction in formal contrasts:
 - sound change and analogical change produce syncretism between forms in realised paradigm for certain lexemes/inflectional classes
 - other lexemes/inflectional classes retain formal contrast

Loss of inflection in the diachrony of French nouns
